

MEDI BIB™
REDUCE THE RISK

Reduce the risk with MediBib™

A disposable alert bib designed to minimise medication round interruptions

MediBib™ is worn by staff whilst preparing and administering medication. It allows staff to concentrate without interruptions from colleagues, patients and visitors. Limiting interruptions minimises errors, creating safer medication rounds and additional time for patient care.

MediBib™ will ensure staff personal hygiene is not compromised when worn and discarded after use. This process also maximises infection control without the high cost and the resulting pollution of laundering.

MediBib™ is an essential risk management tool for all hospitals and health care facilities to help control the risk of medication errors. Studies show the use of medication interruption bibs reduces the number of interruptions by 71% - 74%.

MediBib™ is environment friendly. Made from polypropylene spunbonded nonwoven fabric, MediBib™ is breathable, soft, light, chemical resistant and nontoxic. MediBib™ can be recycled, naturally decomposes and completely incinerates without any poisonous pollutant.

MediBib™ is clearly printed front and back:
"MEDICATION ROUND - DO NOT DISTURB".
100 MediBibs per box, 10 boxes per carton.
